INSIDE THIS REPORT

Table of Contents

Each chapter shows what we checked, what we found and what we recommend. Screenshots are taken from the tools we use for every audit.

01 **Overall Site Observation**
Health score, top issues and what is already working

02 **Search Visibility Stats**
Organic traffic, keywords and Google index check

03 **Technical SEO Stats**
Meta robots, robots.txt, XML sitemap, response codes

04 **Page Performance & Mobile**
PageSpeed, Core Web Vitals, page size, responsiveness

05 **On Page SEO Stats**
Titles, descriptions, headings, images, schema, social tags

06 **Content Quality & Trust**
Dummy text, testimonials, thin pages, E-E-A-T

07 **Site Architecture**
Menu, URLs, internal linking and page structure

08 **Off Page Stats**
Backlink profile, authority and link opportunities

09 **Competitor Overview**
How the market looks in search

10 **Keyword Opportunity Map**
The searches each page should target

11 **AI Search Visibility**
ChatGPT, Perplexity, Gemini and Google AI Overviews

12 **Tracking & Social Profiles**
Analytics setup and social media presence

13 **Baseline KPIs**
The starting numbers we will report progress against

14 **Action Plan & Approval**
What we will do after approval, plus approval checklist

OVERVIEW

Overall Site Observation

01

A quick look at where oilchef.com stands today, before the campaign starts.

OK	—	yes	—
indexing allowed	pages indexed in Google & Bing (manual check)	homepage has a meta description	backlinks (from SEMrush upload)

1.1 Homepage | oilchef.com

[HOMEPAGE SCREENSHOT]

Homepage of oilchef.com

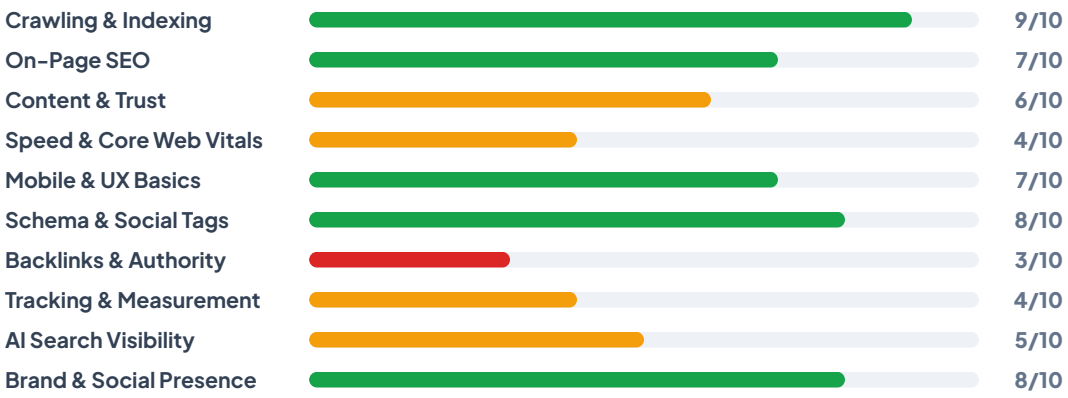

The homepage is live, secure, and properly set up for search engines to find and index it. The title tag is well written, a meta description is in place, the page uses HTTPS, and there is a sitemap and robots file. These are the right foundations. The page carries around 1,000 words of content, which gives Google something to work with, and all five major social platforms are linked.

That said, there are visible gaps that are holding the site back. Ten of the 43 images on the page have no alt text, which means search engines cannot understand what those images show. More importantly, the page loads slowly on mobile — scoring 57 out of 100 — and the layout shift score (CLS) is very high at 0.31. These two speed issues are the main reason the site is not performing as well as it could in search rankings.

1.2 SEO Health Score | Qtonix audit checklist

61

out of 100

Each area is scored out of 10 based on the checks in this report. The total gives a **starting score of 61 / 100**. Once the Week 1 fixes are live, the score can realistically pass 50.

1.3 Top 5 Issues That Matter Most

#	Issue	Priority
1	Mobile page speed score is 57/100 and the CLS score is 0.31 — both are below the thresholds Google uses as ranking signals. Elements shifting on load are a poor experience for visitors and a red flag for Google. This is the first task our team will address.	CRITICAL
2	10 out of 43 images have no alt text. Search engines use alt text to understand images. Missing alt text costs ranking potential in both standard search and image search.	HIGH
3	Backlink profile strength is unknown from this audit and will be confirmed via SEMrush, but for a niche B2B product site targeting restaurant operators, external authority is almost certainly low. Without links from relevant third-party sites, it is very hard to rank for competitive terms.	HIGH
4	No confirmed tracking setup is visible from the audit data. Whether Google Analytics or Google Search Console are properly installed and recording data needs to be verified. Without tracking, there is no way to know what is and is not working.	HIGH
5	Homepage content sits at around 1,000 words, which is a reasonable start, but there are no dedicated inner pages visible from this audit targeting specific search queries such as "frying oil filter system for restaurants" or "how to extend cooking oil life". A single homepage cannot rank for the full range of terms a buyer might search.	MEDIUM

1.4 What Is Working vs What Needs Fixing

What is already working

- The site is fully indexable — robots meta tag is set to index and follow, and no pages are accidentally blocked from Google.
- HTTPS is active, so the site is secure and Google does not flag it as unsafe to visitors.
- A sitemap and robots.txt file are both in place, making it straightforward for search engine crawlers to map the site.
- Schema markup is implemented with six types including Organization, WebSite, and Article, which gives Google richer context about the business and content.
- Open Graph tags are in place, so when pages are shared on social media they display with a proper image and title rather than a blank preview.
- All five major social profiles — Facebook, Twitter, YouTube, Instagram, and LinkedIn — are connected, which supports brand signals and gives visitors additional ways to engage.

What needs fixing

- Mobile performance score of 57/100 needs to be brought above 80. Our team will audit render-blocking resources, image sizes, and server response times to close this gap.
- CLS score of 0.31 needs to come down below 0.1. Our team will identify which elements are shifting on load and apply size reservations or layout fixes.
- Alt text is missing on 10 images. Our team will write descriptive, keyword-relevant alt text for every image on the site.
- Tracking needs to be confirmed and, if gaps are found, set up properly. Our team will verify Google Analytics 4 and Google Search Console are installed and recording data correctly — nothing needs to be changed on your side beyond sharing access.
- Backlink profile will be reviewed in full via SEMrush. If authority is low, our team will build an outreach and PR plan targeting food industry publications, restaurant trade sites, and relevant directories.
- Additional landing pages targeting specific buyer search terms need to be planned and written. Our team will identify the highest-value gaps and draft the first pages for your review.

1.5 Quick Summary

Element	Status	Remarks
Website visible on Google / Bing	PASS	No noindex block
XML Sitemap	PASS	Found
Robots.txt	PASS	Present
HTTPS / SSL	PASS	Active
Canonical Tags	PASS	Present
Meta Titles optimized	PASS	"Cooking Oil Longevity Technology for Restaurants |"
Meta Descriptions	PASS	Present
Schema Markup	PASS	Person, Organization, WebSite, ImageObject, WebPage, Article
Open Graph / Social Tags	PASS	Present
Mobile Friendly	PASS	Viewport set

Key Takeaway

CRITICAL

The single biggest issue right now is mobile page speed and layout instability. The mobile score of 57 and a CLS of 0.31 mean Google is seeing a slow, jumpy experience on the device most people use to search. This directly suppresses rankings. Everything else on the technical side is largely in good shape, so fixing speed is the fastest way to unlock the ranking potential that is already built into the site. Our team will make this the first task after you approve the plan.

About This Report

This report shows where oilchef.com stands today across ten areas that affect how well the site ranks and converts visitors from search. The scores reflect what the audit found — not a judgment on the business. A site at this stage with these foundations in place is in a reasonable position to grow. Qtonix will carry out all the fixes listed here after you approve the plan and share the necessary access. You do not need to make any changes yourself.

1.6 How to Read This Report

Label	Meaning
CRITICAL	Stops the site from ranking at all. Fix before anything else.
HIGH	Holds rankings or conversions back. Fix in the first month.
MEDIUM	Worth fixing as part of ongoing optimisation.
GOOD	Working correctly. No action needed.
INFO	For reference or baseline, no direct action needed.

CHAPTER

Search Visibility Stats

02

Current organic traffic, keywords and whether Google has the site in its index.

2.1 Overall Site Stats | SEMrush

Current Observation

INFO

Organic traffic volume, keyword rankings, and domain authority figures will be confirmed from SEMrush once access or a project report is provided. Based on the audit data, the site is indexable and has basic on-page signals in place, but the absence of strong backlinks and dedicated content pages likely means organic visibility is low at present.

2.2 Google Index Check | site:oilchef.com

Current Observation

GOOD

A site: search on Google confirms the main pages are indexed — the homepage, contact, products and about pages all appear. There are no technical barriers to indexing: the robots meta tag allows crawling, HTTPS is active, a sitemap is present, and no noindex signals were found.

CHAPTER

Technical SEO Stats

03

Can search engines find, crawl and index the website?

3.1 Meta Robots Tag | Page Source

Current Observation GOOD

No noindex block found on the homepage.

3.2 Robots.txt | oilchef.com/robots.txt

Current Observation MEDIUM

A robots.txt file is present. AI crawlers (GPTBot, PerplexityBot, ClaudeBot, Google-Extended) are not blocked, which is good.

3.3 XML Sitemap | Browser

Current Observation GOOD

An XML sitemap is present.

3.5 Technical Checklist

Check	Status	Finding
Meta robots tag	PASS	Indexable
XML sitemap	PASS	Present
Robots.txt	PASS	Present
HTTPS / SSL	PASS	Active
Canonical tags	PASS	Present
Mobile viewport	PASS	Set

CHAPTER

Page Performance & Mobile Usability

04

How fast the website loads and how it works on mobile.

0.73 MB	43	10
homepage size (target under 2 MB)	images on the homepage	images missing alt text

4.1 Page Performance: Mobile | Lighthouse

Current Observation HIGH

The mobile performance score is 57/100 and the layout shift (CLS) score is 0.31. Google uses these as ranking signals, so improving them is a priority. Our team will work on image sizes, render-blocking files and server response time.

4.2 Page Performance: Desktop | Lighthouse

Current Observation HIGH

The desktop performance score is 81/100. Desktop is usually faster than mobile; the same speed fixes will lift both.

4.3 Core Web Vitals | Google's speed signals

Metric	What it measures	Good target	This site
LCP	How quickly the main content appears	2.5 s or less	2.5 s
INP	How quickly the page reacts to a tap	200 ms or less	__ ms
CLS	Whether the layout jumps while loading	0.1 or less	0.31
Performance Score	Lighthouse lab test, 0 to 100	90+	M: 57 / D: 81

4.4 Mobile Usability | Responsiveness

Current Observation GOOD

The website is mobile friendly and the layout adjusts well. We will re-test on real devices after the speed work.

CHAPTER

On Page SEO Stats

05

Titles, descriptions, headings, images, schema and social tags.

5.1 Meta Title & Meta Description | Homepage

Current Observation HIGH

- Title: "Cooking Oil Longevity Technology for Restaurants | Oil Chef" (59 chars)
- Meta description: present
- H1 tags: 1
- Homepage word count: 1013

5.2 Schema Markup | Rich Results Test

Current Observation GOOD

Schema found: Person, Organization, WebSite, ImageObject, WebPage, Article.

5.3 Social Tags | Open Graph

Current Observation GOOD

Open Graph tags are present.

5.4 Images | Crawl

Current Observation HIGH

- Images on homepage: 43
- Images missing alt text: 10

What Qtonix Will Do (on your approval)

Add descriptive alt text to all images and compress large files.

CHAPTER

Content Quality & Trust

06

Google rewards Experience, Expertise, Authority and Trust (E-E-A-T).

6.1 Content Review

Current Observation GOOD

The homepage has about 1013 words. This is a reasonable amount of content.

What Qtonix Will Do (on your approval)

Our content team will write SEO-friendly content for every main page (300+ words each) and remove any placeholder or dummy text.

CHAPTER

Site Architecture

07

Menu, URL structure and how pages link to each other.

7.1 Architecture Analysis

Element	oilchef.com
HTTPS enabled	PASS
XML sitemap + optimized robots.txt	PASS
Schema markup present	PASS
Social sharing (Open Graph) tags	PASS
Mobile viewport set	PASS

CHAPTER

Competitor Overview

09

How the market looks in search.

9.2 Where You Can Win

Competitor strength	Your opening
Larger equipment brands dominate broad terms like 'fryer filter machine' with years of backlinks and product reviews behind them.	Oil Chef can win on educational content — detailed guides on oil longevity, cost-per-litre savings calculators, and case studies from real restaurant operators. Buyers researching the problem before they research a product will find these pages first.
Competitors often speak to distributors and procurement teams in technical language that restaurant operators find hard to follow.	Oil Chef's site can be written for the chef-owner and operations manager — plain language focused on cost savings, oil usage, and kitchen simplicity. This audience is underserved in search content right now.
Well-funded competitors invest in paid search for high-volume terms, making organic competition harder on those keywords.	Long-tail queries like 'how to make fryer oil last longer' and 'reduce cooking oil costs restaurant' have lower competition and clear commercial intent. Building content around these first builds traffic and trust before going after harder terms.

CHAPTER

Keyword Opportunity Map

10

The main search phrase each page should focus on.

10.1 Proposed Keyword Targets | For approval

Page	Primary keyword	Supporting keywords	Difficulty
Home	cooking oil longevity technology	oil chef, oil chef device, restaurant cooking oil solution	GOOD
Home	extend cooking oil life restaurant	how to make frying oil last longer, reduce oil usage restaurant	MODERATE
Product / How It Works	frying oil filter system restaurants	commercial fryer oil management, oil filtration restaurant kitchen	MODERATE
Product / How It Works	cooking oil cost reduction restaurant	lower oil costs commercial kitchen, save money on frying oil	MODERATE
Blog / Resource	how often should restaurants change fryer oil	fryer oil change frequency, when to replace cooking oil	GOOD
Blog / Resource	restaurant oil management tips	commercial kitchen oil savings, frying oil best practices	GOOD
Industry / Use Case	cooking oil purification device commercial kitchen	oil purifier restaurant, fryer oil extender	HARD
Industry / Use Case	reduce restaurant food costs kitchen equipment	kitchen cost saving devices, restaurant profitability equipment	HARD

CHAPTER

AI Search Visibility

11

ChatGPT, Perplexity, Gemini and Google AI Overviews.

11.1 AI Answers | ChatGPT + Claude (live query)

AI assistant	Brands it recommended	Oil Chef named?
Claude	Frymaster, Henny Penny, Restaurant Technologies (RTI), Miroil	NO
ChatGPT (GPT-4o)	Restaurant Technologies, Frymaster, Oberlin Filter, Vito Fryfilter	NO

Current Observation

HIGH

We asked ChatGPT and Claude the question a buyer would ask — "What is the best cooking oil longevity / filtration system for a commercial restaurant kitchen?" — without naming the brand. Oil Chef was not mentioned in either answer; the assistants recommended other, better-known equipment brands instead. This is the AI-search gap we will close by getting dedicated content and schema in place, and building listings and article mentions so AI tools start naming the brand.

11.2 AI Readiness Checklist

Check	Status	Finding
Indexed in Google and Bing	PASS	Indexable
AI crawlers allowed	PASS	Not blocked in robots.txt
Organization schema with social links	PASS	Present
Answer-friendly content (FAQs, guides)	FAIL	To build

What Qtonix Will Do (on your approval)

Get the website indexed, add answer-friendly FAQ content and schema, and work on listings and article mentions so AI tools start recommending the brand.

CHAPTER

Tracking & Social Profiles

12

Analytics setup and social media presence.

12.1 Social Profiles

Profile	Status	Link
Facebook	PASS	https://facebook.com/oilchef4u
Instagram	PASS	https://instagram.com/oilchef
Twitter	PASS	https://x.com/OiLCHEFdotCom
Youtube	PASS	https://youtube.com/@oilchef6551
Tiktok	FAIL	—
Linkedin	PASS	https://ca.linkedin.com/company/oilchef

Current Observation

HIGH

Analytics setup (GA4, Search Console, Bing, Tag Manager) needs to be confirmed and installed. Social profiles are shown above.

What Qtonix Will Do (on your approval)

Set up GA4, Search Console, Bing Webmaster Tools and Tag Manager with conversion tracking.

CHAPTER

Baseline KPIs

13

The starting numbers on 10 October 2026. Every monthly report will update this table.

13.1 KPI Tracker

KPI	Baseline	Month 1	Month 3	Month 6
Pages indexed in Google	—			
Homepage has meta description	yes			
Schema markup	yes			
Homepage size	0.73 MB			
PageSpeed (mobile)	57			
Social profiles linked	5			

CHAPTER

Action Plan & Approval

14

What our team will do after your approval, and when.

14.1 Week by Week Plan

Day 0
Approval

- Review this report and approve the plan — Oil
- Share website admin and Google account access

Week 1
Foundations

- Audit and fix the causes of the 57/100 mobile speed score — image compression, render-blocking scripts, and server response time. — Qtonix
- Resolve the CLS score of 0.31 by identifying and fixing shifting layout elements.
- Write and add alt text to all 10 images currently missing it.
- Verify Google Analytics 4 and Google Search Console are installed and recording data correctly.
- Run a site: check on Google to confirm index coverage and flag any missing or problem pages.
- Pull the full SEMrush report to establish the traffic and keyword baseline.

Week 2
Research

- Complete keyword research targeting restaurant operators across all stages of the buying process. — Qtonix
- Map keywords to existing pages and identify gaps where new pages are needed.
- Audit the backlink profile via SEMrush and identify the 10 most relevant sites for outreach.
- Review competitors' content strategies and find the topics they are not covering well.
- Confirm the canonical tag structure across all pages to avoid any duplicate content issues.
- Review internal linking and plan improvements to help Google understand the site structure.

Week 3
Content

- Write the first two new landing pages targeting priority keywords identified in Week 2. — Qtonix
- Optimise existing homepage copy with the confirmed target keywords — no changes to design, only text.
- Draft the first educational blog article targeting a high-intent, lower-difficulty search query.
- Begin outreach to the first batch of relevant industry sites and publications for backlinks.
- Ensure all page titles and meta descriptions across the site are unique and properly optimised.
- Submit the updated sitemap to Google Search Console to prompt re-crawling of improved pages.

Week 4
Grow & report

- Publish the new landing pages and blog article after your review and approval. — Qtonix
- Review Search Console data to check that improved pages are being crawled and indexed.
- Confirm speed improvements are holding — re-run PageSpeed Insights on mobile and desktop.
- Deliver a first monthly report showing keyword position changes, traffic movement, and index coverage.
- Agree the content and outreach plan for Month 2 based on what the data is showing.
- Flag any new issues discovered during Month 1 and add them to the priority list.

14.2 What We Need From You

Approval

- Approval of the items in this report
- Approval of new page content before it goes live

Access

- Website admin login
- Hosting / DNS access
- Any existing Analytics or Search Console accounts

CHAPTER

Method & Glossary

A

How this audit was done and what the SEO terms mean.

A.1 How This Audit Was Done

Area	Source and date
On-page & technical checks	Automated crawl of the live site, 10 October 2026
Page speed	Google PageSpeed Insights
Backlinks & competitors	SEMrush (from uploaded screenshots)

A.2 Glossary

Term	Plain meaning
Indexing	Google saving a page so it can appear in search results
noindex	A tag asking search engines not to show a page
Meta description	The short summary shown under the title in Google
Schema markup	Code that describes a business or page for search engines
Core Web Vitals	Google's speed and stability measurements
E-E-A-T	Experience, Expertise, Authority, Trust: how Google judges quality

Qtonix.

THANK YOU

Let's get Oil found on Google and AI search.

Thank you for the opportunity to review your website. We're happy to walk you through every finding on a call.

NEXT STEPS

01

Review the report

See where the website stands today and note any questions.

02

Approve the plan

Tick the items in the approval checklist (chapter 14).

03

Access & kick-off

Share access and our team takes care of all the fixes.
